

# BICYCLE IDENTIFICATION SYSTEM POLICE & USER GUIDE

*The following template identifies the typical points that are marked on a bicycle. Variation may occur depending the models and brands.*

# TYPICAL MARKING POINTS

Frame

Cassette & Rear derailleur

Wheels

Bicycles are marked with warning stickers, to prevent burglars & thieves from committing a crime. The same way Police officers know that the bicycle has DNA PROTECTED forensic marking applied. We recommend applying the stickers, as visible as possible, for prompt detection.

UV LIGHT

E87690P

The client's unique PIN code can be read under UV light. It consists of special ultra durable and non-erasable ink

Handle bar

Suspension fork

Crank, Chain ring

# DNA PROTECTED FORENSIC PEN

A SIMPLE, PERMANENT AND EFFECTIVE METHOD OF IDENTIFYING AND MARKING BICYCLES.

## About DNA PROTECTED Forensic marking?

**DNA PROTECTED** is an innovative security company, giving you the latest forensic crime solutions methods. With microdot technology and forensic pens, we are indisputably linking criminals to their crimes & thieves to their stolen goods.

Forensic marking is the application of DNA to an object in order to make it distinctive, unique and undoubtedly recognizable. How else would you be able to pick one mobile phone from a pile of 100 of the same make and model? Serial numbers and other identification methods are being detected and overridden as thieves keep advancing and adapt to the newest security measures. The goal is to apply markings without hurting the look or the quality of the item on the one hand and are as good as impossible to remove on the other

## How the PIN marking is detected and read by police?

The process is very simple.

A DNA PROTECTED sticker has been applied to indicate that a bicycle is marked with unique forensic code.

Police Officers are using UV light to detect the unique forensic mark on your bicycle. Once detected they can log in into the data base and obtain the ownership of it. In case stickers are removed or damaged, Police Officers still are able to detect the unique PIN under a UV light

## What are the "Typical Marking Points"?

Typical marking points are the locations on your bicycle where your PIN has been written/applied. These are usually most expensive and valuable parts of your bicycle and police officers are also trained and guided to look for these marks. In some models & brands typical marking points may vary and also user is free to mark additional points upon his criteria
